6.2 POWER ON/OFF SEQUENCE

Global LCD Panel Exchange Center

 $(Ta = 25 \pm 2 \, ^{\circ}C)$

To prevent a latch-up or DC operation of LCD module, the power on/off sequence should be as the diagram below.

Power ON/OFF Sequence

- Note (1) The supply voltage of the external system for the module input should follow the definition of Vcc.
- Note (2) Apply the lamp voltage within the LCD operation range. When the backlight turns on before the LCD operation or the LCD turns off before the backlight turns off, the display may momentarily become abnormal screen.
- Note (3) In case of VCC is in off level, please keep the level of input signals on the low or high impedance.
- Note (4) T4 should be measured after the module has been fully discharged between power off and on period.
- Note (5) Interface signal shall not be kept at high impedance when the power is on.

Item	Symbol	Value	Unit
Ambient Temperature	Та	25±2	°C
Ambient Humidity	На	50±10	%RH
Vertical Frame Rate	Fr	60	Hz

Note (1) The LCD module should be stabilized at given temperature for 1 hour to avoid abrupt temperature change during measuring in a windless room.

- 1. Measure Module's W,R,G,B spectrum and BLU's spectrum. Which BLU (for V315H1-L01) is supplied by CMI.
- 2. Calculate cell's spectrum.
- 3. Calculate cell's chromaticity by using the spectrum of standard light source "C".

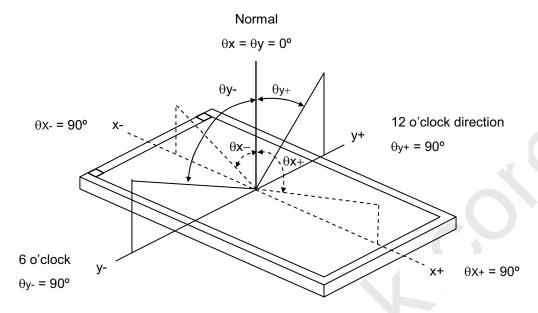

Note (1) Light source is the BLU which supplied by CMI and driving voltage are based on suitable gamma voltages.

PRODUCT SPECIFICATION

Note (2) Definition of Viewing Angle (θx , θy):

Viewing angles are measured by Autronic Conoscope Cono-80 (or Eldim EZ-Contrast 160R)

Note (3) Definition of Contrast Ratio (CR):

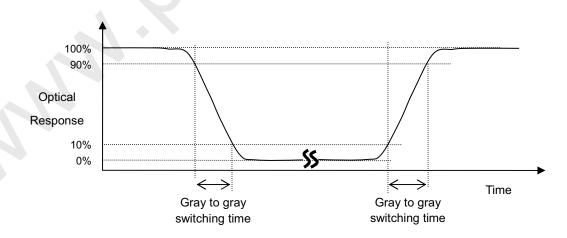

The contrast ratio can be calculated by the following expression.

L255: Luminance of gray level 255

L 0: Luminance of gray level 0

CR = CR (5), where CR (X) is corresponding to the Contrast Ratio of the point X at the figure in Note (6).

Note (4) Definition of Gray-to-Gray Switching Time:

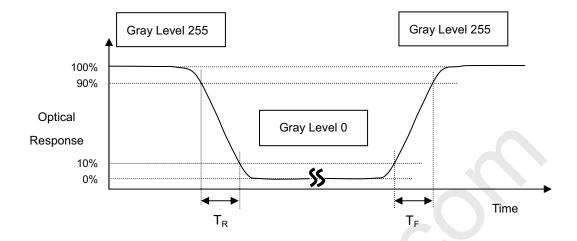

The driving signal means the signal of Gray 0, 31, 63, 95, 127, 159, 191, 223, 255. Gray to gray average time means the average switching time of Gray 0, 31, 63, 95, 127, 159, 191, 223, 255. to each other.

Note (5) Definition of Response Time (T_R, T_F):

Note (6) Definition of White Variation (δW):

Measure the luminance of gray level 255 at 5 points

 $\delta W = Maximum [L (1), L (2), L (3), L (4), L (5)] / Minimum [L (1), L (2), L (3), L (4), L (5)]$

Note (7) Definition of White Variation (δW):

Measure the luminance of gray level 255 at 5 points

 $\delta W = Maximum [L (1), L (2), L (3), L (4), L (5)] / Minimum [L (1), L (2), L (3), L (4), L (5)]$

[Dino Hint: SEC and AUO are 9 points and the test point distance is W/6]

Note (8) Definition of Transmittance (T%) :

Measure the luminance of gray level 255 at center point of LCD module.

$$Transmittance (T\%) = \frac{Luminance of LCD module}{Luminance of backligh unit} \times 100\% \ PRECAUTIONS$$

8. PRECAUTIONS

8.1 ASSEMBLY AND HANDLING PRECAUTIONS

- [1] Do not apply rough force such as bending or twisting to the module during assembly.
- [2] It is recommended to assemble or to install a module into the user's system in clean working areas. The dust and oil may cause electrical short or worsen the polarizer.
- [3] Do not apply pressure or impulse to the module to prevent the damage of LCD panel and Backlight.
- [4] Always follow the correct power-on sequence when the LCD module is turned on. This can prevent the damage and latch-up of the CMOS LSI chips.
- [5] The distance between COF edge and rib of BLU must bigger than 5mm. This can prevent the damage of COF when assemble the module.
- [6] Do not design sharp-pointed structure / parting line / tooling gate on the COF position of plastic parts, because the burr will scrape the COF.
- [7] If COF would bended to assemble in the module. Do not put the IC location on the bending corner of COF.
- [8] The gap between COF IC and any structure of BLU must bigger than 2mm. This can prevent the damage of
- [9] Bezel opening must have no burr. Burr will scrape the panel surface.
- [10] Bezel of module and bezel of set can not press or touch the panel surface. It will make light leakage or scrape.
- [11] When module used FFC / FPC, but no FFC / FPC to be attached in the open cell. Customer can refer the FFC / FPC drawing and buy it by self.
- [12] The gap between Panel and any structure of Bezel must bigger than 2mm. This can prevent the damage of Panel.
- [13] Do not plug in or pull out the I/F connector while the module is in operation.
- [14] Use a soft dry cloth without chemicals for cleaning, because the surface of polarizer is very soft and easily scratched.
- [15] Moisture can easily penetrate into LCD module and may cause the damage during operation.
- [16] When storing modules as spares for a long time, the following precaution is necessary.
 - [16.1] Do not leave the module in high temperature, and high humidity for a long time. It is highly recommended to store the module with temperature from 0 to 35 at normal humidity without
 - [16.2] The module shall be stored in dark place. Do not store the TFT-LCD module in direct sunlight or fluorescent light.
- [17] When ambient temperature is lower than 10°C, the display quality might be reduced.
- [18] The peeling strength of COF is 200gf/cm.
- [19] During module assembly process, the static electricity around the environment should be less than 300V.

PRODUCT SPECIFICATION

8.2 SAFETY PRECAUTIONS

- [1] The startup voltage of a Backlight is approximately 1000 Volts. It may cause an electrical shock while assembling with the inverter. Do not disassemble the module or insert anything into the Backlight unit.
- [2] If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, skin or clothes, it has to be washed away thoroughly with soap.
- [3] After the module's end of life, it is not harmful in case of normal operation and storage.
